

Approx 1/20th Scale

Design Template Usage

For best quality, all files being placed or used in the design program should be either 1/20 scale at 1500 dpi or at full scale at 75 dpi. All text should always be converted to curves or outlines depending on the software being used and the color space should be CMYK. File formats accepted for final outputs are .eps, .pdf, .tif, or .psd.

Note: actual make and model of bus used for event may be different.
